PUBLIC

Title:	Falkland Islands National Accounts 2015
Paper Number:	140/17
Date:	30 August 2017
Responsible Director:	Director of Policy and Economic Development
Report Author:	Economist and Economic Policy Advisor
Portfolio Holder:	Michael Poole, Policy
Reason for paper:	This paper is submitted to Executive Council: For policy decision
Publication:	Yes
Previous papers:	None
List of Documents:	Falkland Islands National Accounts 2007-2015

1. Recommendations

Honourable Members are recommended to:

- a) Note the national accounts estimates for 2015 and revised estimates that have been produced for previous periods; and
- b) Approve publication of the Falkland Islands National Accounts 2007-2015, attached as Annex 1.

2. Additional Budgetary Implications

- 2.1. None.

3. Executive Summary

- 3.1. GDP and other national accounts estimates for 2015 have been prepared and presented in the Falkland Islands National Accounts 2007-2015 report (annexed to this paper). The report also includes revised estimates for previous periods – in particular, per

capita GDP and GNI estimates have been updated using new population estimates based on the 2016 census.

- 3.2. GDP for 2015 was £206.4 million, having grown by 26% in real terms compared to 2014, driven by the 2015/16 oil exploration campaign and associated activity. Fishing and aquaculture was again the largest industry, accounting for 39% of GDP. Per capita GDP for 2015 was estimated to be £70,800, while per capita GNI (which is calculated by adjusting GDP for net income received from abroad, and is a better reflection of income accruing to Falkland Islands residents) was £46,600.
- 3.3. Falkland Islands GDP and GNI reflect the impact of revenues from fisheries and also windfall revenues from recent oil exploration. Revenues from both of these sectors are volatile and therefore, per capita GDP and GNI figures for a single year cannot be looked at in isolation.
- 3.4. The contribution by different industries to Falkland Island GDP in 2015 was as follows:

4. Resource Implications

4.1. Financial Implications

None.

4.2. Human Resource Implications

None.

5. Legal Implications

None.

6. Communication

- 6.1 The Falkland Islands National Accounts 2007-2015 report, as well as the data tables from the report in Excel spreadsheets, will be made available on the FIG website.

1. Introduction

- 1.1. This report presents Falkland Islands national accounts for the years 2007-2015. Gross domestic product (GDP) estimates are presented at both current (nominal) and constant (real) prices. Production accounts breaking down output by institutional sector and industry, and a generation of income account for the whole economy, are also included.
- 1.2. The document is divided into three parts. The first part explains what national accounts are, and discusses some relevant concepts. The second part is a short narrative report highlighting the key figures and trends identified by the national accounts. The third part is made up of data tables.
- 1.3. Major methodological changes were made during the compilation of 2011 and 2012 national accounts, and 2007-2010 estimates were revised in line with the new methodology. Pre-2007 estimates have not been updated and are not comparable to these updated estimates. The increased scope, particularly the inclusion of oil exploration and development, was expected to contribute to higher GDP estimates. Some changes to 2014 figures have been made with the publication of 2015 national accounts, reflecting the availability of new data.

PART I: INTRODUCTION TO NATIONAL ACCOUNTS

2. What are national accounts?

- 2.1. National accounts present data on economic activities taking place in a given geographic area over a period of time. The best known component of national accounts is gross domestic product (GDP), which is widely considered to be a key indicator of the health of an economy. National accounts also provide valuable information about the structure of an economy, and can include a range of other economic indicators.
- 2.2. The System of National Accounts 2008 (SNA 2008), published by the United Nations, sets standards for the compilation of national accounts. Falkland Islands national accounts have, as far as possible, been prepared in line with these standards. However, due to limitations on data availability and statistical resource, the Policy Unit has not compiled a full set of national accounts as defined in SNA 2008. Work has focussed on compiling a production account and a generation of income account.

3. What is Gross Domestic Product?

- 3.1. Gross Domestic Product¹ measures the amount of economic activity occurring within a defined territory and time-frame. The gross domestic product of an economy is equal to the sum of the gross value added by each institutional unit (i.e. each company, household etc.) within that economy.
- 3.2. Gross value added is equal to output less intermediate consumption (goods and service purchased from other institutional units and used in producing output – this does not include the compensation of employees of the unit, which forms part of the gross value added).
- 3.3. GDP estimates can be presented at both current (nominal) and constant (real) prices. Current price estimates of GDP are compiled using prices prevailing in the year of measurement. For example, current price GDP for 2010 is compiled using 2010 prices to value the goods and services produced in that year, and current price GDP for 2011 values that year's output using 2011 prices. Changes in GDP at current prices are thus composed of changes in the volume of goods and services provided *and* changes in the prices of those goods and services. This makes current price GDP a poor measure of changes in the size of an economy (although for economies like the Falkland Islands that engage in large scale trade with the rest of the world, the prices received for export goods are clearly important for economic wellbeing).
- 3.4. Constant price estimates of GDP separate the change in volume of economic activity from the change in prices, and are a better measure of change in an economy over time. This is achieved by valuing output in all measurement years using prices from a given year (the base

¹ "Gross" means that consumption of fixed capital (roughly, the extent to which capital assets used in the production process are "used up") has not been deducted.

year). This means that changes in constant price GDP will reflect changes in the volume of goods and services produced, rather than changes in prices.

4. Classifications used in national accounts

4.1. National accounts estimates can be analysed in by institutional sector and by industry.

4.2. Falkland Islands national accounts are divided into four sectors:

- Financial and non-financial corporations²
- Government
- Non-profit institutions serving households (NPISHs)
- Households

4.3. Sectors reflect the nature of the institutional unit carrying out the activity. Institutional units can also be categorised according to the type of activity they carry out. Falkland Islands national accounts use the Industrial Classification of All Economic Activities (ISIC, Rev.4) standard, published by the United Nations, to classify economic activities by industry. The industry classifications used are³:

A01	Crop and animal production, hunting and related activities	K	Financial and insurance activities
A03	Fishing and aquaculture	L	Real estate activities
B	Mining and quarrying	M	Professional, scientific and technical activities
C	Manufacturing	N	Administrative and support service activities
D	Electricity, gas and steam supply	O	Public administration and defence; compulsory social security
E	Water supply; sewerage, waste management and remediation activities	P	Education
F	Construction	Q	Human health and social work activities
G	Wholesale and retail trade; repair of motor vehicles and motorcycles	R	Arts, entertainment and recreation
H	Transportation and storage	S	Other service activities
I	Accommodation and food service activities	U	Activities of extraterritorial organisations and bodies
J	Information and communication		

² SNA 2008 recognises financial corporations and non-financial corporations as distinct sectors, but they are aggregated in Falkland Islands national accounts due to the small number of units in the financial corporations sector.

³ Section T: Activities of households as employers; undifferentiated goods- and services-producing activities of households for own use is excluded from Falkland Islands National Accounts.

4.4 Institutional units are generally classified according to their main economic activity. However, in cases where one institutional unit carries out significant volumes of more than one activity, overall figures for that unit are split according to the different activities it performs. Data for more than one industry may be aggregated in published data where this is necessary to preserve the confidentiality of institutional units.

PART II: FALKLAND ISLANDS GROSS DOMESTIC PRODUCT ESTIMATES

5. Gross domestic product

5.1. Table 1 presents current price gross domestic product estimates for the Falkland Islands for the years 2007-2015.

Table 1. Falkland Islands gross domestic product in current prices

Millions of FKP (current and basic prices)	2007	2008	2009	2010	2011	2012	2013	2014	2015
Value added, gross / Gross domestic product	106.0	120.1	97.7	167.4	184.7	204.3	160.3	176.3	206.4

5.2. Table 2 and figure 1 present constant price GDP estimates. Table 2 shows annual GDP estimates in constant 2012 prices and the annual percentage change in GDP, and figure 1 illustrates how GDP has evolved over time using an index of annual constant price GDP estimates, taking the value 100 in 2007⁴.

Table 2. Falkland Islands gross domestic product and annual growth rate at constant prices

Millions of FKP (at constant 2012 and basic prices)	2007	2008	2009	2010	2011	2012	2013	2014	2015
Annual growth rate %	n/a	8.4%	-19.6%	53.2%	-6.2%	20.9%	-20.4%	-1.8%	25.5%
Value added, gross / Gross domestic product	134.9	146.2	117.6	180.2	169.0	204.3	162.6	159.7	200.5

⁴ In interpreting an index, the difference between the index value in a given year and 100 is equal to the percentage change in the variable (in this case real GDP) over that period. So, this figure shows us that real GDP was 48.6% (148.6 - 100) higher in 2015 than in 2007.

Figure 1. Indexed Falkland Islands gross domestic product (2007=100)

5.3. Real GDP grew by 25.5% in 2015, driven by activity related to the 2015/16 oil drilling campaign. The compound annual growth rate of real GDP between 2007 and 2015 was 5.1%, although this masks large annual fluctuations related to changes in oil industry activity and fish catches.

6. Breakdown by institutional sector

6.1. Table 3 shows how different institutional sectors of the economy contributed to GDP in 2015, and figure 2 shows how this has changed over time.

Table 3. Falkland Islands 2015 value added, gross / gross domestic product by institutional sector

Millions of FKP (current and basic prices)	Non-financial and financial corporations	General government ⁵	Households	NPISHs	Total economy
Value added, gross / Gross domestic product	162.7	28.6	14.1	0.9	206.4
Per cent of total	78.8%	13.9%	6.9%	0.4%	100.0%

Note: Figures may not sum due to rounding

⁵ Including healthcare and education services provided by government.

Figure 2. Falkland Islands gross domestic product by institutional sector 2007-2015.

7. Breakdown by industry

7.1. Table 4 and figure 3 show the breakdown of gross domestic product by industry in 2015. The categorisation of economic activities is based on the United Nations International Standard Industrial Classification of All Economic Activities (ISIC)⁶. ISIC section A, agriculture, forestry, and fishing is presented separately for agriculture (ISIC division 01) and fishing (ISIC division 03) to reflect the importance of these industries in the Falkland Islands. The ISIC category called 'Manufacturing, mining and quarrying and other industrial activities' consists mostly of oil related activities and is thus called here 'Oil and gas exploration, quarrying, manufacturing and other industrial activities'.

7.2. Fishing remains the biggest economic activity in the Falkland Islands, accounting for 39 per cent of GDP in 2015⁷. Between 2007 and 2015 the fishing industry's share of GDP has varied between 35 and 48 per cent. Wholesale and retail trade, transportation and storage, and public administration-related activities also remain among the biggest activities.

7.3. The ISIC does not recognise tourism (broadly defined to include the provision of accommodation, meals and so on to tourists) as a discrete industry - this is because industries

⁶ The categories used are ISIC revision 4, but the titles have been adapted for Falkland Islands context for presentation purposes.

⁷ Note that this excludes fishing in Falklands waters by non-resident companies (i.e. jigging for illex squid under Type B licences).

are defined according to the activity they perform, not the identity of their customers. However, the Falkland Islands Tourist Board has commissioned Tourism Satellite Accounts, according to which tourism gross value added was £2.9 million, or 1.6 per cent of GDP, in 2014.

7.4. Figure 4 shows how different industries have grown over time; oil exploration and fishing have been the main sources of volatility in the economy.

Table 4. Falkland Islands value added by type of activity.

	Millions of FKP (current and basic prices)	2015	Per cent of total
1-01	Crop and animal production and related service activities	3.4	1.6%
1-03	Fishing and aquaculture	81.3	39.4%
2	Oil and gas exploration, quarrying, manufacturing and other industrial activities	42.6	20.6%
2a	<i>Of which: manufacturing</i>	1.7	0.8%
3	Construction	8.1	3.9%
4	Wholesale and retail trade, transportation and storage, accommodation and food service activities	23.2	11.2%
5	Information and communication	7.4	3.6%
6	Financial and insurance activities	3.0	1.5%
7	Real estate activities	7.6	3.7%
8	Professional, scientific, technical, administrative and support service activities	4.8	2.3%
9	Public administration and defence, education, human health, and social work activities	23.9	11.6%
10	Other service activities	1.2	0.6%
TOTAL	Gross domestic product	206.4	100.0%

Note: Figures may not sum due to rounding

Figure 3. Falkland Islands value added by activity in 2015

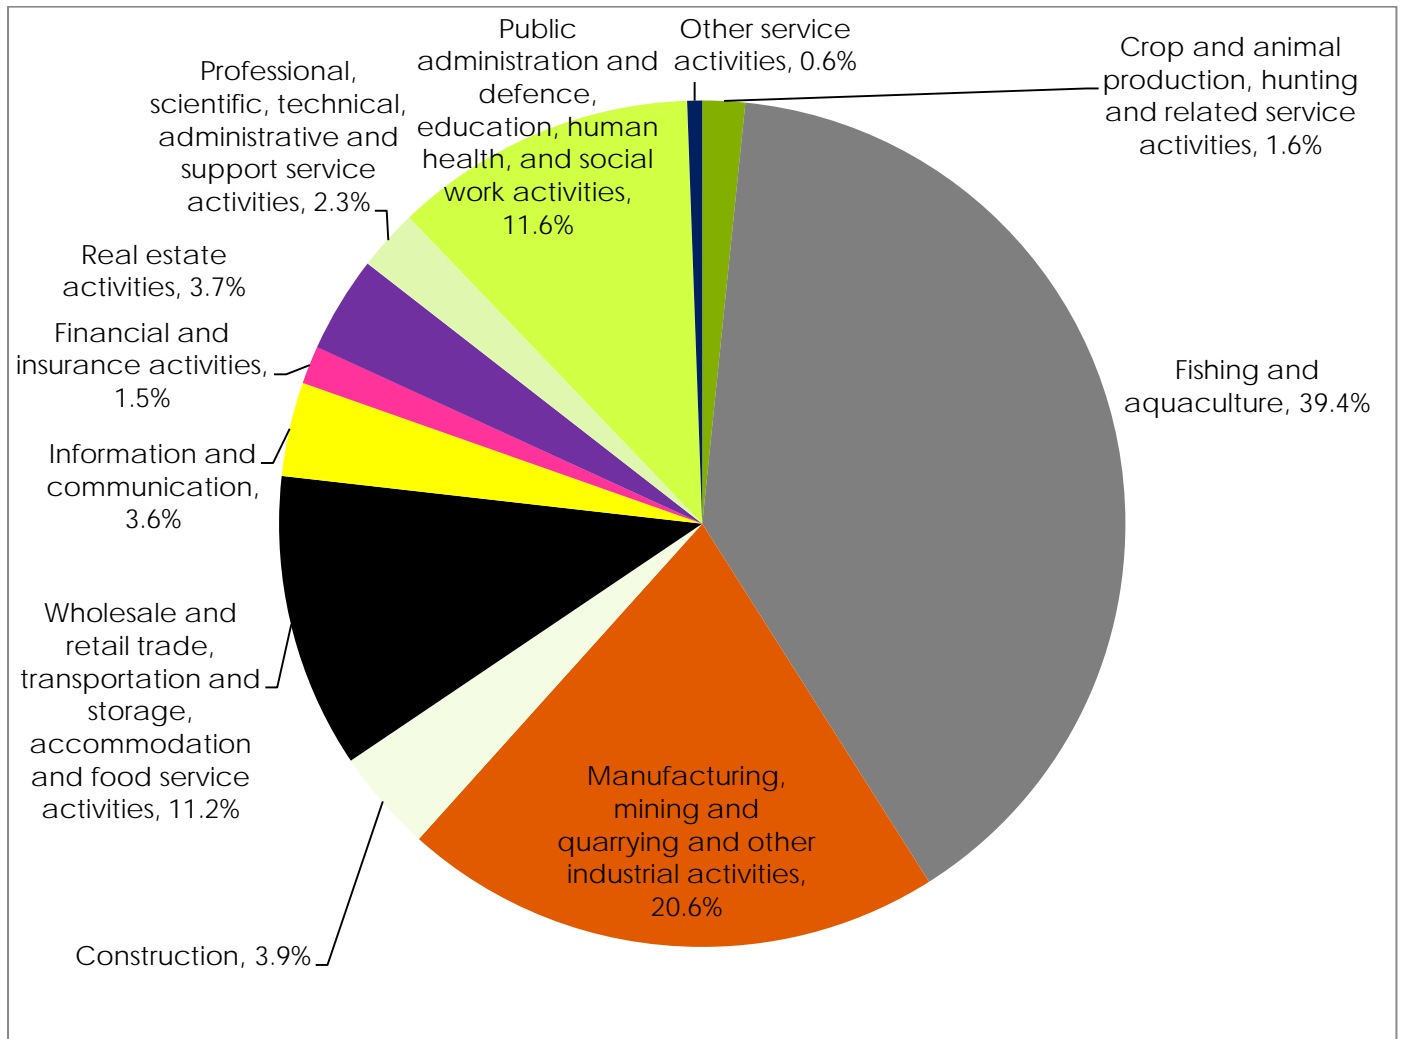

Figure 4. Gross value added by economic activity

8. Per capita gross domestic product and gross national income

8.1. Gross domestic product per capita was £70,800 in 2015, based on a population of 2,915⁸. This is up from £63,000 in 2014⁹. Table 5 shows per capita GDP for 2007-2015 for the whole economy, as well as for the economy excluding fishing and aquaculture and activities directly related to oil and gas exploration¹⁰.

8.2. Many companies operating in the Falkland Islands are owned, wholly or partially, by shareholders resident overseas. Similarly, much of the labour in the Falkland Islands economy is performed by non-residents (particularly in the fishing and oil and gas industries). Therefore, gross national income (GNI), which is an estimate of the income received by residents of an economy regardless of where the activity generating that income takes place, and is derived by adjusting GDP for net income received from abroad, can be a better measure of the economic welfare of Falkland Island residents than GDP. GNI per capita for 2015 was £46,600, up from £44,500 in 2014¹¹.

Table 5. Gross domestic product per capita

Thousands of FKP (at current and basic prices)	2007	2008	2009	2010	2011	2012	2013	2014	2015
Gross domestic product per capita	41.4	46.9	38.1	65.4	72.1	79.7	59.8	63.0	70.8
Gross domestic product per capita excluding fishing, aquaculture, oil & gas exploration	22.0	24.1	22.4	n/a	26.3	28.3	28.8	28.3	28.4

⁸ For the purposes of national accounts, resident population is defined as the census population excluding people resident in MPC and including those temporarily absent during the census. Similarly, output produced by institutional units resident in MPC (e.g. civilian contractors serving only the military) is excluded from Falkland Islands GDP.

⁹ 2014 GDP and GNI per capita figures have been revised to reflect a higher estimate of the usually resident population in that year, based on Census 2016 data, as well as small revisions to the total GDP and GNI estimates.

¹⁰ It should be noted that these figures do not reflect what the economic situation would be were the fishing and oil and gas exploration industries to cease to exist. Among other things, if these industries ended then their local suppliers would experience reduced demand, and government budgets and hence output would need to be cut.

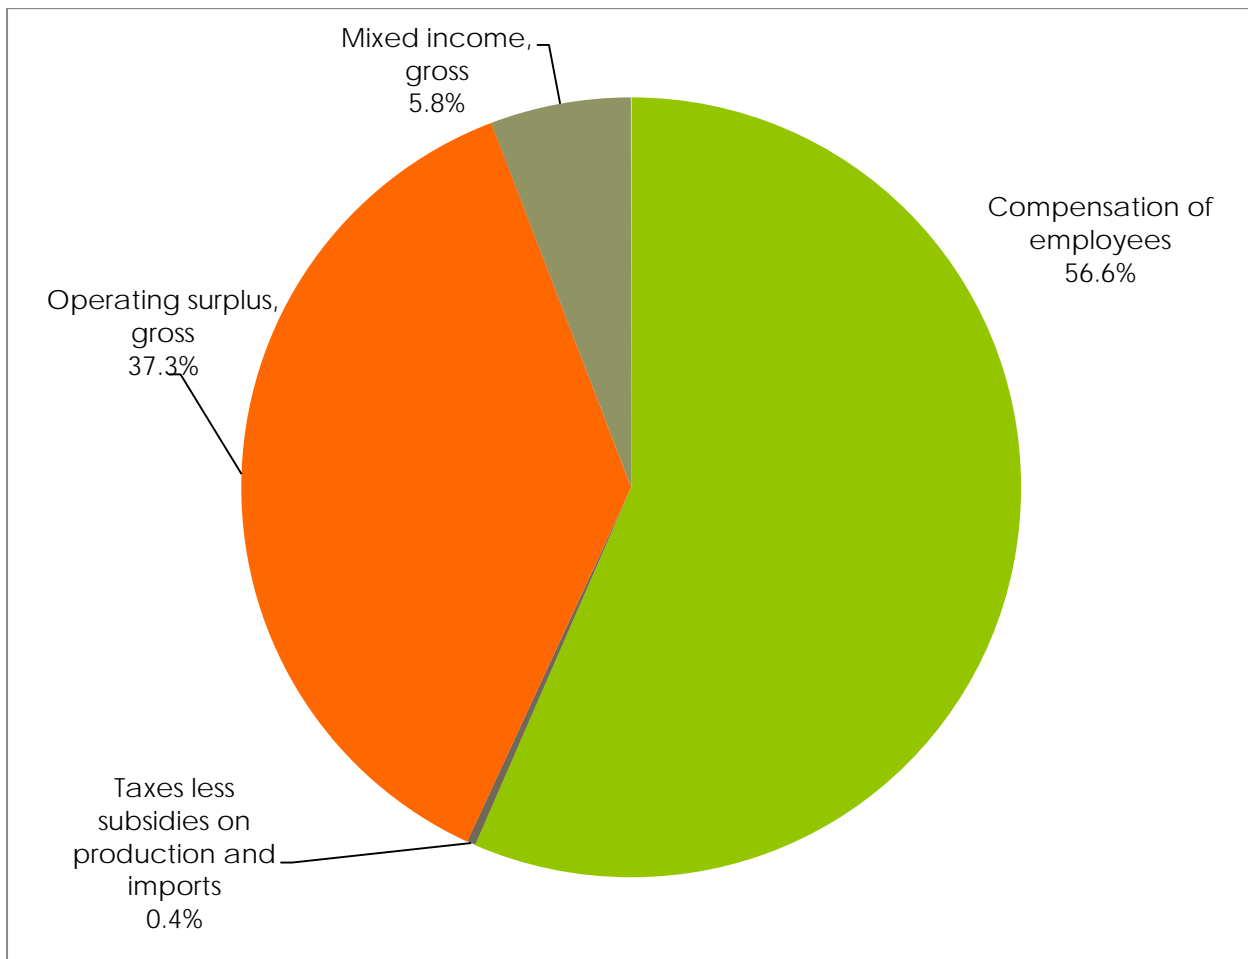

¹¹ GNI includes income streams such as licence fees and investment income accruing to FIG, as well as companies' operating surpluses not distributed to shareholders, and is not equivalent to the average income received by residents.

9. Generation of income account

9.1. Figure 5 shows how primary income breaks down into gross operating surplus and mixed income, compensation of employees, and taxes less subsidies on production and imports. In 2015, £117 million was paid as compensation of employees, with a gross operating surplus of £77 million and gross mixed income of £12 million.

9.2. Operating surplus measures the surplus generated by production activities carried out by companies before interest and other payments on financial assets, taxes on profits, and rents on natural resources. Mixed income refers to the surplus received by households from production activities, which is made of compensation to business owners for the supply of both labour and capital to the business. Compensation of employees includes pension and social contributions in addition to wages and salaries.

Figure 5 Distribution of primary income in 2015

Technical notes

- For oil related activities, all corporations that had activities in Falkland Islands territory and were liable to pay Falkland Islands taxes have been included.
- For oil companies that hold licenses and rights for oil exploration and development in the Falkland Islands, capitalised exploration and appraisal costs have been included in output for own final use and intermediate consumption, whereas general overheads have been excluded from output for own final use.
- Administrative data, on which Falkland Islands National Accounts to a great extent relies, do not in every case contain sufficient information to distinguish intermediate from non-intermediate consumption. This may result in an overestimation of intermediate consumption and consequently an underestimation of value added.
- Agricultural production for own final consumption has not been accounted for.
- Compared to pre-2007 compilations of Falkland Islands national accounts, the scope has been broadened significantly, for example, by including oil related companies more extensively. The method of calculating the production account has also been refined particularly with respect to defining intermediate consumption.
- Government services that are considered market output include PWD Electricity, PWD Housing and PWD Quarry and asphalt. Falkland Islands Meat Company and Falklands Landholdings are now considered market output, while Falkland Islands Development Corporation, Falkland Islands Tourist Board, and Public Accounts Committee, are considered non-market output.
- Mount Pleasant Complex (MPC) is considered 'rest of the world' territory for the purposes of national accounts. Units operating exclusively in MPC have been excluded as non-resident.
- Fishing companies holding only type B licences (to fish for illex squid) are considered non-resident.
- Except for general government, 2010 figures have been estimated on limited data compared to the rest of the years and are likely to have larger margins of error. This is because a complete company and self-employed dataset was not collected for the year in the same way as for the years 2007-2009 and 2011-2013. The main figures were estimated using other available data and should be used with caution. Estimating many of the more detailed figures was not possible and are marked as 'n/a' in the tables.
